

HOW CAN REGENEXX SATISFY THE REQUIREMENTS TO ADD ORTHOBIOLOGICS TO A HEALTH PLAN?

WHAT MAKES REGENEXX UNIQUE?

Regenexx is revolutionizing the healthcare landscape by being the only orthobiologic provider to document cost-saving impacts on company health plans. But what are orthobiologics and why is Regenexx a game-changer?

UNDERSTANDING ORTHOBIOLOGICS

Orthobiologics are substances that facilitate the healing of musculoskeletal tissues or slow down degeneration. The most popular ones are Platelet-rich Plasma (PRP) and Bone Marrow Concentrate (BMC).

INTERVENTIONAL ORTHOBIOLOGICS: A MIDDLE PATH

This approach utilizes precise image-guided injections to aid healing, bridging the gap between conservative care like physical therapy and invasive surgical options. For instance, a patient who might traditionally need ACL surgery could be treated with a precise injection of BMC.

THE EVIDENCE BASE: DOES IT WORK?

Significant research, particularly in PRP and BMC, has substantiated the efficacy of these procedures. They have been found to be effective for a wide range of applications including knee osteoarthritis, tendon injuries, and more.

WHY ADD REGENEXX TO CORPORATE HEALTH PLANS?

Cost Savings: Orthopedic surgery is expensive. Regenexx's less invasive, cost-effective treatments can save companies 40-70%.

Productivity: Less invasive treatments mean less downtime for employees.

Employee Retention: Unique benefits like Regenexx are compelling for talent retention, particularly during the era of the great resignation.

Standardization: A Necessity for Adoption

Regenexx has set itself apart by standardizing its treatment protocols, making it feasible to integrate into self-funded health plans for over 1700 companies.

ELEMENTS OF STANDARDIZATION

National Network of Physicians: Strict selection ensures high-quality delivery.

Physician Training: Ensures consistency across the board.

Quality Assurance: Standardized substances and procedures are used.

Outcome Tracking: World's largest patient outcome and complications registry.

Utilization Review: Monitors the appropriateness of treatments.

Publications: Peer-reviewed papers validate Regenexx's efficacy and safety.

HOW REGENEXX GETS INCLUDED IN HEALTH PLANS

Regenexx fits into self-funded health plans by meeting Third Party Administrator (TPA) requirements for experimental and investigational treatments. Our standardized, evidence-backed, and quality-assured approach ticks all boxes for inclusion, fulfilling regulatory, evidence, health outcome, and equivalency standards.

REGULATORY COMPLIANCE

Regenexx's treatments don't require FDA approval, but all tools used are FDA-approved or exempted. Regenexx falls under the physicians state license to practice medicine. No different than orthopedic surgery.

SOLID EVIDENCE

Multiple Randomized Controlled Trials (RCTs), 43 peer reviewed papers, and positive position statements by professional organizations have supported the effectiveness of PRP and BMC.

IMPROVING NET HEALTH OUTCOMES

Less invasive with fewer complications, these procedures have a positive impact on health outcomes when compared to surgical alternatives.

AT LEAST EQUIVALENT TO ESTABLISHED TREATMENTS

Orthopedic surgeries often lack strong evidence for their efficacy, making the proven effectiveness of Regenexx procedures a viable alternative.

By understanding the advantages, standardization, and evidence-based outcomes of Regenexx, you as an employer or broker are better equipped to make informed healthcare decisions for optimal employee welfare and cost-efficiency.
